# Acme Analytics Customer Support Handbook

Internal - revision 5 - 15 February 2026

## 1. Support channels and hours

Customer support is available by email, live chat and the customer portal. Live chat and phone support operate Monday to Friday from 08:00 to 18:00 UTC. Email and portal tickets are monitored around the clock for Enterprise customers and during business hours for all other plans.

Premium Support customers also have access to a dedicated Slack channel with a named customer success manager.

## 2. Response time targets

Ticket priority determines the first-response target. Priority 1 (service down) must be answered within 1 hour, 24 hours a day. Priority 2 (major feature impaired) must be answered within 4 business hours. Priority 3 (minor issue or question) must be answered within 1 business day. Priority 4 (feature request) must be answered within 3 business days.

Agents must update the customer at least every 2 hours on open Priority 1 tickets until service is restored.

## 3. Escalation procedure

A ticket is escalated to a Tier 2 engineer if it is not resolved within 8 business hours or if it involves data accuracy, security or billing disputes. Tier 2 escalates to the on-call engineering manager when a Priority 1 ticket remains open after 4 hours.

Security incidents must be reported to the security team immediately through the internal incident form, and customer-facing agents must not discuss technical details of an incident until the security team approves the communication.
